## **RE: Software Developer Internship**

I am a third-year Computer Science student at the University of Calgary, enrolled in the Science Internship Program, and seeking a full-time software development internship of four to sixteen months. With a passion for full-stack development, UI/UX design, and problem-solving through technology, I am eager to apply my skills while gaining valuable industry experience.

Through academic and personal projects, I have built a strong foundation in full-stack development. My portfolio website, designed in Figma, developed with Flask/Jinja, and deployed with Gunicorn, integrates APIs including Twilio for SMS, Sheety for data storage, and NPoint for user reviews. I also created a Morse Code Converter web app using Flask and Jinja, and collaborated with a 5-member GUI team to design and implement interfaces for an online multiplayer board game in Figma and JavaFX. These experiences have strengthened both my technical skills and my ability to work effectively in a team.

Beyond development, I bring leadership and communication skills that translate directly into the workplace. As President and Web Developer for PERMIKA Calgary, I led a 50+ member student community while managing and deploying the club's website. I also run a YouTube channel with over 150,000 views, where I explain technical concepts in clear and accessible ways, demonstrating my ability to translate complex ideas into practical solutions.

I am excited about the opportunity to contribute to meaningful projects, continue developing my skills, and make a meaningful impact during my internship.

Sincerely,

Sagesse Ariyanto
